

## Dark Themes

We've added a dark theme for Angular and React applications. These are available starting in version 2.0.0 of our [@pxblue/themes](#) package.

## Hybrid Code Examples

We have begun building out mobile pattern examples, starting with [Login](#). You'll notice two new options in the framework selection dropdown for our supported mobile technologies.

## Design Patterns

New design patterns and examples are available for [Forms and Validation](#) and [Internationalization](#).

## Ionic Support

PX Blue now offers support for developing mobile applications with [Ionic](#). Ionic 4+ is capable of working with the Angular Material component library and PX Blue themes for Angular. We will be phasing out support for NativeScript applications in favor of Ionic.

## Component Library

Re-usable components built by the PX Blue team for use in your applications. We currently have **Hero** components available for both Angular (version 7) and [React](#).

## Miscellaneous

- Bug fixes and theme improvements
- New icons and updated [Iconography Page](#)
