React Auth Workflow

- Rearchitected from the ground up for greater control and customization - Screens are all exported individually as independent components - Screen customizations available through screen components - Declarative syntax for building custom flows / reordering screens / adding or removing screens - Router independence (react-router still recommended) - Simplified internationalization giving users more control over translations - More robust error management solution - Dependencies updated to support the latest third-party versions

Figma Component Sticker Sheet

- Added a new Figma component sticker sheet following Material Design 3.

Themes

- Fixed 3 issues in Angular Themes package.

Miscellaneous

- Established a new community space in GitHub for innersource contributions.
